Pdx1 Cistrome of Pancreatic Islets - Study GBCO4474**Genomics Study Specifications**

Study Name	Pdx1 Cistrome of Pancreatic Islets
Contact Name	Doris A. Stoffers (University of Pennsylvania)
Publication	http://www.ncbi.nlm.nih.gov/pubmed/22322596
My Strategies	Return to My Strategies page
Classification	Targets and roles of transcriptional regulators
Links	 Biomaterials Graph  ArrayExpress
BCBC Release Date	July 23, 2012
Public Release Date	July 23, 2012
Citation	Khoo C, Yang J, Weinrott SA, Kaestner KH, Naji A, Schug J, Stoffers DA. Research resource: the pdx1 cistrome of pancreatic islets . <i>Mol Endocrinol.</i> 2012. 26:521-33

Synopsis

Study Description	Goals	
Approaches	Results	Conclusions
Related Studies		

Despite the central role Pdx1 plays in pancreatic development and adult beta-cell function, we have only rudimentary knowledge of the transcriptome targets of Pdx1 that mediate these phenotypes. Therefore, global location analysis of Pdx1 occupancy in pancreatic islets was performed. The evolutionary conservation of target genes was used to identify the most relevant Pdx1 targets by performing chromatin immunoprecipitation sequencing on both human and mouse islets.

Platform types	TF Binding ChIP-Seq, TF Binding
Platforms	Not available
Study Design Type	<ul style="list-style-type: none"> binding_site_identification_design
Study Factors	Show study factors
Study Assays	Show study assays

Access to Study Data

This Study Data is publicly available to all users.

Gene List(s)

Use the following form(s) to refine the parameters and add the gene list to a strategy:

|Fold Change| Greater Than:

Confidence Level: High Confidence All Results

For a microarray experiment a result with high confidence has a confidence level of at least 80%.

For a ChIP-chip experiment a result with high confidence has a confidence level of at least 90% and all fold changes are positive.

Reference (Denominator): Input

Lists of Locations

Use the following form(s) to refine the parameters and add the list of genomic sequences corresponding to peak calls to a strategy. Depending on your choices, these searches may be slow.

Pdx1 Binding in Mouse Islets

Retrieve:

Whole Genome

Peaks in a Region of Interest (specify below):

Enter a region (e.g., chr:start-stop) or enter just the chromosome (e.g., chr12 or chrX) to search for peaks on a single chromosome. Select the "Whole Genome" option or leave the text box blank to return all results from this analysis.
