Microarray Analysis of MIN6 cells treated with Exendin-4 over time. - Study GBCO1170

Genomics Study Specifications

Study Name	Microarray Analysis of MIN6 cells treated with Exendin-4 over time.
Contact Name	Anna L. Nolan (Massachusetts General Hospital/HHMI)
Publication	Not provided
My Strategies	Return to My Strategies page
Classification	Cell stimulation/injury; Islet/beta-cell stimulation/injury
Links	 Biomaterials Graph  ArrayExpress
BCBC Release Date	April 30, 2004
Public Release Date	April 30, 2004
Citation	unavailable

Synopsis

Study Description	Goals	
Approaches	Results	Conclusions
Related Studies		

The aim of the study was to investigate the effect of Exendin-4 on MIN6 cells allowing for the elucidation of the various transcriptional programs initiated by this multifunctional peptide hormone. MIN6 cells were treated with Exendin-4 for 24, 48 and 72 hours. After these time points RNA was isolated and used for hybridization (on Cy3) against matched control MIN6 cells (on Cy5) using the Mouse PancChip 5.0 . Three assays were carried out for each time point.

Platform types	Expression microarray, Expression
Platforms	Show platform Mouse PancChip
Study Design Type	<ul style="list-style-type: none"> compound_treatment_design time_series_design
Study Factors	Show study factors
Study Assays	Show study assays

Access to Study Data

This Study Data is publicly available to all users.

Gene List(s)

There are no gene lists currently available for this study.

Genome Browser

There are no genome browser tracks currently available for this study.

Lists of Locations

There are no genomic location datasets currently available for this study.

Access Status

 This resource is publicly viewable.
