NOD-Rag1^{null}Prf1^{null} - Mouse Strain RES1421**Mouse Information**

Common Name:	NOD-Rag1 ^{null} Prf1 ^{null}
MGI Official Name:	NOD.Cg-Rag1 ^{tm1Mom} Prf1 ^{tm1Sdz/SzJ}
Description:	Mice that are homozygous for both targeted mutations are viable, fertile, normal in size and do not display any gross physical or behavioral abnormalities when housed under specific pathogen free conditions. These double homozygote mutant mice have no mature T or B lymphocytes, no detectable NK cell cytotoxic activity, and lack serum immunoglobulin. The number of nucleated spleen cells is significantly reduced in double mutant mice, when compared to the single homozygote, NOD.129S7(B6)-Rag1 ^{tm1Mom} /J (Stock No. 003729). Although an increased number of DX5+CD122+ NK cells are found in the spleens of double mutants, these NK cells have impaired cytotoxic activity. The disruption of Prf1 ablates NK cell cytotoxic activity resulting in increased engraftment levels over that observed with Stock No. 003729. All mutant mice develop thymic lymphomas. This double mutant mouse strain may be useful in studies involving engraftment of human hematolymphoid cells.

Genetic Alterations

1) Targeted Mutagenesis	
Type of Allele	Global Null
Targeted Gene	recombinant activating gene 1 (Rag1 - NCBI GeneID:19373)
Targeted Allele	Not provided (MGI:97848)
Description of Targeting Vector	Not provided
Targeting Vector Genbank File	Not provided
Citations	Not Available
2) Targeted Mutagenesis	
Type of Allele	Global Null
Targeted Gene	Perforin 1 (Pore forming protein) (Prf1 - NCBI GeneID:18646)
Targeted Allele	Not provided (MGI:97551)
Description of Targeting Vector	Not provided
Targeting Vector Genbank File	Not provided
Citations	Not Available

Strain Information

Strain Type:	Congenic Strain
Chimera/Founder Genetic Background:	Not provided
Current Genetic Background:	Not provided (date recorded: Not provided)
Strain Description:	Not provided
