Differential expression of sorted Alpha and Beta cells - Study GBCO3834

Genomics Study Specifications

Study Name	Differential expression of sorted Alpha and Beta cells
Contact Name	Markus Grompe (Oregon Health and Science University)
Publication	http://www.ncbi.nlm.nih.gov/pubmed/21882062
My Strategies	Return to My Strategies page
Classification	Tissue expression, surveys and comparisons
Links	Biomaterials Graph ArrayExpress
BCBC Release Date	May 26, 2010
Public Release Date	July 29, 2011
Citation	Dorrell C, Schug J, Lin CF, Canaday PS, Fox AJ, Smirnova O, Bonna R, Streeter PR, Stoeckert CJ, Kaestner KH, Grompe M. Transcriptomes of the major human pancreatic cell types . Diabetologia. 2011. 54:2832-44

Synopsis

Study Description
Goals

Approaches
Results
Conclusions

Related Studies

The goal of this experiment is to identify genes differentially expressed in FACS-sorted Alpha and Beta cells.

Platform types	Expression microarray, Expression
Platforms	Show platform Agilent Whole Human Genome Microarray 4x44K [G4112F]
Study Design Type	<ul style="list-style-type: none"> ● cell_type_comparison_design
Study Factors	Show study factors
Study Assays	Show study assays

Access to Study Data

This Study Data is publicly available to all users.

Gene List(s)

Use the following form(s) to refine the parameters and add the gene list to a strategy:

Human alpha versus islet cells

|Fold Change| Greater Than:

Confidence Level: High Confidence All Results

For a microarray experiment a result with high confidence has a confidence level of at least 80%.

For a ChIP-chip experiment a result with high confidence has a confidence level of at least 90% and all fold changes are positive.

Reference (Denominator): Islet Cells
